

# The last Innovation of Frewitt is going around the World

**F**rewitt, the world leader in powder size reduction technologies, presents FreDrive-Lab, a modular system, which is revolutionizing milling solutions for R&D, formulation, and analytical laboratories in the pharmaceutical, cosmetic, fine chemical and food industries. This patented innovation was developed specifically in

collaboration with R&D teams of selected customers, world leaders in their own sectors, in order to meet and surpass today's industry challenges. The FreDrive-Lab integrates 6 different milling processes in one system, enabling the user to produce a wide variety of particle sizes ranging down to a lower particle size distribution spectrum of D<sub>90</sub> (< 10 µm). The 6th and latest addition to our FreDrive-Lab, the NanoWitt high performance bead mill, brings another dimension to particle size reduction, enabling wet nano milling down to 50 nanometers.
